

## LIFT-O-MAT PTL | with stop in the compressed position

The LIFT-O-MAT PTL is a gas spring with an additional mechanical lock in the compressed position.

Similar to the ball point pen principle, the lock can be released by a light push; the gas spring then extends by itself.

Besides the force support function, LIFT-O-MAT PTL features an end position stop, thereby eliminating the need for additional fixing elements. At the same time, LIFT-O-MAT PTL is easy and comfortable to use.

The LIFT-O-MAT PTL is **used** especially in furniture, e.g.: in recessed connector strips in conference tables, bar compartments, backrests of sofas, armrests, and head-rests adjustment.
