

STAB-O-SHOC HD15 | for low damping forces

The standard STAB-O-SHOC HD15 is a no-pressure hydraulic damper. STAB-O-SHOC HD15 is orientation-specific and achieves its optimum function in almost vertical installation with force transmission without a return stroke, in one direction of movement. Horizontal **special variations** are possible, as are models providing force support during extension or length-controlled damping.

Typical **areas of application** are automotive design, plant design, industrial applications, and the furniture industry. Here, the simple STAB-O-SHOC HD15 is used as a motion damper in flap systems, allowing gentle opening or closing.
