

STAB-O-SHOC TA20

| for the smallest installation lengths

The TA20 damper is a high-performance, non-pressure, hydraulic vibration damper. It is not orientation-specific, meaning that force transmission without a return stroke is possible in any installation position. Equipping the outside of the pressure tube with a diaphragm allows very short installation lengths.

TA dampers are available in different dimensions, even for high loads. The damper characteristic curve can be adapted to the respective application at the factory.

Specific **areas of application** in utility vehicles are steering dampers in trailing axles or medical technology, e.g., backrest adjustments in hospital and nursing home beds.
