

LIFT-O-MAT FR | for infinitely variable holding

The LIFT-O-MAT FR is a gas spring featuring a special piston package with an integrated friction element, which – in addition to force support – allows infinitely variable holding over the entire adjustment range. Even weight fluctuations between defined limits, for example due to varying loads, can be offset.

LIFT-O-MAT FR allows free positioning of the application, without the need to actuate a lock or release mechanism.

LIFT-O-MAT FR provides for comfort in the application and makes work easier for the user.

Its **application possibilities** are wide ranging; for example, wall cabinets in kitchen applications or free-moving arms in medical technology or in the electronics industry.

Special advantage:

- Ergonomic, variable positioning of the application
