

Replacement Instructions:

1. Follow general instructions on back of pouch. Read instructions through before beginning installation. Have someone to hold and support the hood, hatch, liftgate or trunk while replacing the old lift supports.
2. Remove old support and original ball stud and nut from the bracket located on the vehicle body. This hardware will be used to install the new lift support.
3. Install the ball stud with the larger thread using original washers and nut onto the mounting bracket. Mount ball stud in the same directions has the one removed.
4. Remove the original screws that retain the tube end mounting bracket to the hood.
5. Install the new ball stud with smaller threads into the top threaded hole toward the front of the hood. Install the new lift support in the same orientation as the one that was removed.
6. Check that all connections are tight and secure.
